

Windows Users:

1. Check the version of gcc compiler, using following commands in command window.

```
gcc --version
```

2. Download compilers from here (pick whichever that suits your machine needs).

- <https://www.cygwin.com/>
- <https://mingw-w64.org/doku.php>

3. create a file named hello.cpp with following content.

```
1. #include <iostream>
2. using std::cout;
3.
4. int main()
5. {
6.     cout << "Hello World!\nWas't that easy?\n";
7.     return 0;
8. }
```

4. Run the following command

```
1. g++ hello.cpp -o hello
```

5. Run for the output

```
1. hello.exe
2. //OR
3. hello
```
